

## Clear Liquid Diet

Clear liquids are easily digested and leave no undigested residue in your intestinal tract. This is why a clear liquid diet must be followed before a procedure. Not following the diet correctly can affect the prep results and the ability to view your intestinal tract.

Clear liquids contain no solids or pulp. When a clear liquid is in a container such as a bowl or glass, the container is visible through the substance. Although not “clear”, black coffee/tea and sodas like Coke are ok on a clear liquid diet.
