

freenome

**Help us detect
CRC early**
with a blood draw.

Join a clinical study to develop
a blood test that detects CRC early.

About Freenome

Freenome is developing next-generation blood tests to
detect cancer in its earliest, most treatable stages.

Early detection matters

Finding cancer early can improve treatment outcomes and survival¹. That's why, at Freenome we are looking to develop a blood test for early detection of multiple cancers.

Help detect cancer early

Your participation will help us develop new blood tests for early detection of CRC.

Easy participation

Just get a blood draw. No medications or treatment are part of this research study.

Our thanks

Receive our appreciation and a stipend for participating.

¹ "Promoting Early Detection and Treatment of Cancer". Centers for Disease Control and Prevention. Accessed November 21, 2021. <https://www.cdc.gov/cancer/ncccp/priorities/early-detection-treatment.htm>

Who can participate

- People who are 45-85 years old
- Willing to provide a blood sample
- Planning to undergo a colonoscopy or had a colonoscopy within the last 6 months
